

Feature Release: Short Pick and Find Alternative Inventory

Canary7 continues to enhance the warehouse management experience with updates designed to streamline picking processes.

This release introduces a new 'Pick Options' tab within the profile setup, enabling greater flexibility in how inventory is picked.

Below is a breakdown of each new feature enhancement.

Pick from Alternative Inventory

- New 'Change Inventory' button allows users to select alternative inventory locations during execution.
- Popup displays available inventory from other locations as defined in the profile.
- Once selected, the system reallocates inventory and updates the pick process accordingly.

Short Pick

- Enables short picking of inventory mid-process.
- Appears as a button in the bottom left corner if activated in the profile.
- User must verify the short pick; if reason codes are enabled, selection is required.
- Suspended quantity is sent back to the instruction pool for reassignment.

Partial Pick

- Allows partial picking of an instruction.
- At the end of the instruction, the user is prompted to confirm the partial pick.
- Behaviour is consistent with prior version but includes enhanced confirmation step.

Pick Method Pop-Up

- When enabled, users are prompted to select a picking method upon completing a partial pick.
- Supports consistent tracking and reporting across varied picking workflows.
