

New Locating Rule: “Consolidate item with location that already contains item UOM”

On ‘Add Locating Rule Detail’, a new locating method has been added:

‘Consolidate item with location that already contains item UOM’

The new locating rule will be used during stock Check-In. Canary7 will suggest a Put-Away location where there is already existing Batch Number, or existing Batch Number and existing UOM, which is ordered by Location Selection ASC.
