

## Packing Item Reference Verification.

Within the packing profile, the option to ‘Only Accept Reference’ has been added to the verifications tab. When enabled, this will configure the ‘Enter Item/Barcode’ field found in packing execution to only accept the item’s reference.

☐ Enter Base Qty

☐ Enter UOM Qty

☐ Preset To 1

☒ Only Accept Reference

## Adding Extra’s via Rule Master

A new process called ‘Add Extra’ has been added to rule master. This will allow users to define which extra types are used and the quantity of extras on a shipment. To use this feature, select the event ‘Shipment Created’ and use a selection that is defined as ‘Selection Class: Shipment’. Then simply create a process and select Add Extra.
