

Soft Allocation Status Column added to Shipping Enquiry – Detail tab.

A new column and filter for soft allocation status has been added to the detail tab shipping enquiry. This will allow users to see the soft allocation status of all details across all shipments.

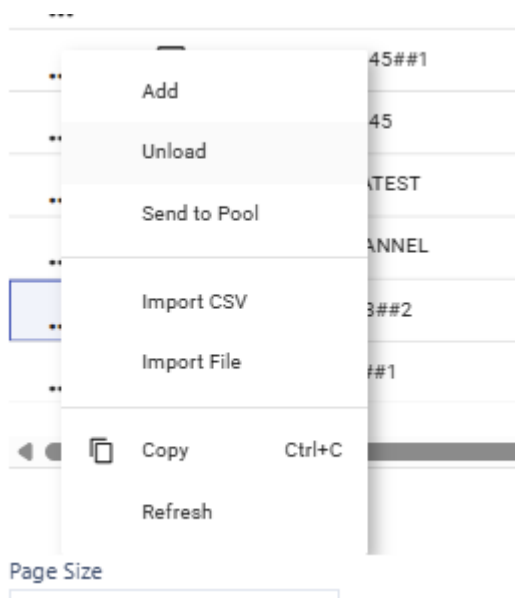

| Soft Allocation Status | Shipment Header ID | Item | Item Description |
|------------------------|--------------------|------------|------------------|
| Fully Allocated | 468002 | MMBL23C... | 5 8 X 3 4 |
| Fully Allocated | 468003 | MH1295M... | 5 1 4 M H 129 |
| Fully Allocated | 468004 | IP523GTJ | Wooden Jigsaw |

Unload Shipment

An 'unload' button has been added to the three dots on shipping enquiry.

This will be available to shipments at 'Awaiting Dispatch Confirmation' and that have 'Loading Pending' as part of their outbound status flow. When a shipment has been unloaded, it will revert the shipment and container to 'Loading Pending'. This can be used in cases of when a shipment has been put into the wrong load.

Batch Number in Packing

When a shipment is ran through the wave with the wave step 'Add Batch Number', the batch number will now be displayed on packing below the item. The batch number can be seen in both the pack to and pack from containers.

This will be useful as it will allow greater accuracy when packing orders.
